

Amendment to the Claims:

This listing of claims will replace all prior versions, and listings, of claims in the application.

Listing of Claims:

1. (currently amended) A luminaire comprising:
 - a main reflector with a light emission window;
 - a counter reflector positioned opposite to the main reflector;
 - means for accommodating at least one electric lamp positioned in between the main reflector and the counter reflector,
 - characterized in that the counter reflector is provided with a light-transmitting cover which is positioned at a side of the counter reflector facing away from the means for accommodating the at least one lamp, and which cover has a light-entry face exposed to the light emission window, and which cover has a light-exit surface at the side facing away from the means for accommodating the at least one lamp, wherein the cover further includes opaque diffuser bodies that are partly recessed in the cover at the side of the cover facing away from the means for accommodating the at least one lamp.
2. (original) A luminaire as claimed in claim 1, characterized in that the counter reflector consists of a reflective coating provided on a side of the cover facing towards the means for accommodating the at least one electric lamp.
3. (previously presented) A luminaire as claimed in claim 1, characterized in that the cover is an optical waveguide.
4. (original) A luminaire as claimed in claim 1, characterized in that the cover is connected to the counter reflector via suspension means.

5. (original) A luminaire as claimed in claim 4, characterized in that the cover essentially only contacts the counter reflector with its suspension means.

6. (previously presented) A luminaire as claimed in claim 4, characterized in that the suspension means are formed by an outer edge of the counter reflector.

7. (previously presented) A luminaire as claimed in claim 4, characterized in that the cover is partly coated with a reflective layer on a side of the cover facing towards the means for accommodating the at least one lamp.

8. (previously presented) A luminaire as claimed in claim 1, characterized in that the cover is provided with a light-outcoupling element.

9. (currently amended) A luminaire as claimed in claim 8, characterized in that the light-outcoupling element is chosen from the group consisting of a lens, a prism, ~~a diffuser body~~, and combinations thereof.

10. (currently amended) A luminaire as claimed in claim 9, characterized in that the ~~diffuser body~~ outcoupling element is provided at a side of the cover facing ~~away from towards~~ the counter reflector, ~~which diffuser body is partly recessed in the cover.~~

11. (previously presented) A luminaire as claimed in claim 1, characterized in that an edge of the cover is coated with a color filter.
